

# MCC Monthly Projections - Script Tutorial

---

Follow these instructions to get going with AdWords scripts in a few minutes.

Note: These scripts are proprietary and will not work without an active free trial or Hero Pro plan.

**What it does:** Use month to date stats and calculate your projections through the end of the month.

**Why use it:** Aside from the obvious, you can determine how much to spend now so you're not doubling your spend near the end of the month. Also use it to predict management fee.

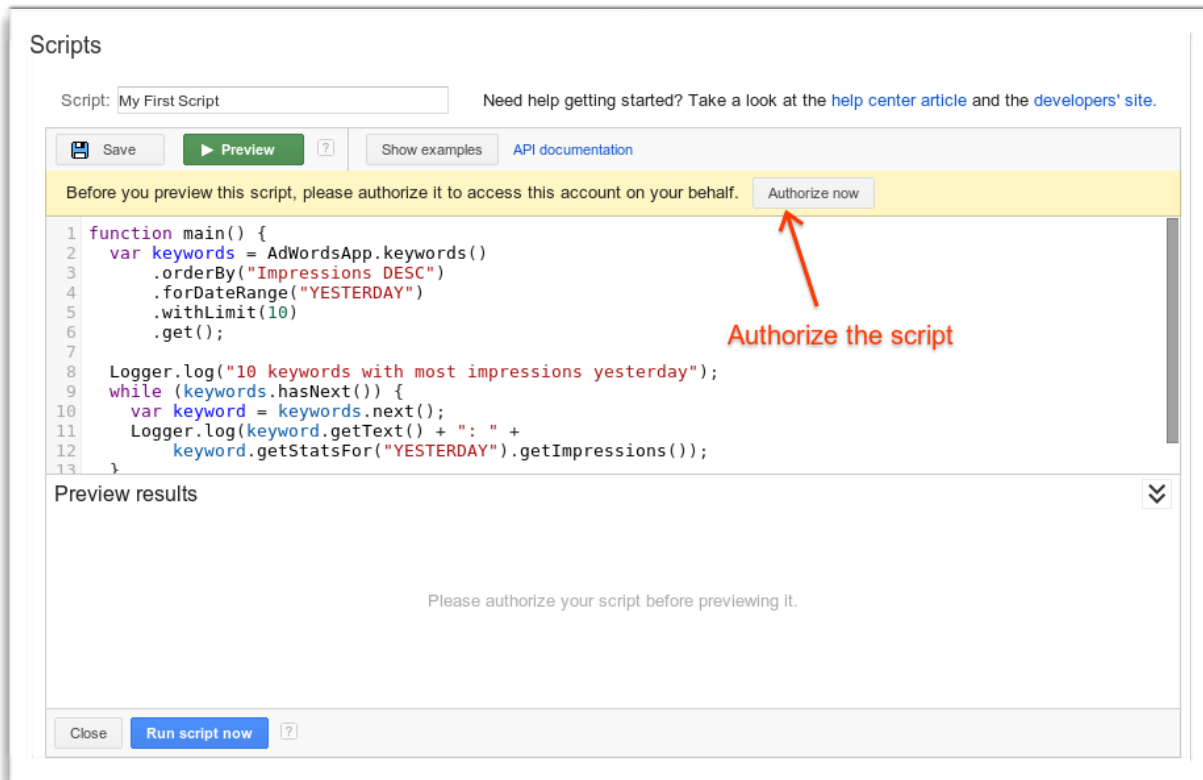

1. On the left Nav area in your MCC click on “**Scripts**”
2. Click on the red script button **+ SCRIPT**
3. Delete placeholder text

```
function main() {  
  
}
```

4. Copy and paste the MCC Converting Keywords script from our Hero Pro library into the AdWords Script editor area.
5. Enter e-mail address. The script will send you an updated spreadsheet when complete.

```
var eMail = “johndoe@gmail.com“;
```

6. **Authorize the script. Don't worry, this only has to be done once per script.**

7. **Click “Run script now” and select “Run without previewing.”**

- Since the reports live in your Google Drive spreadsheet previewing does nothing.

8. **The script will automatically generate a spreadsheet in your MCC's Google Drive. After the script status says “Completed” you can view results on your Google Drive spreadsheet!**
